

INTRODUCING GALILEO

A Revolutionary Decarbonization Software Tool

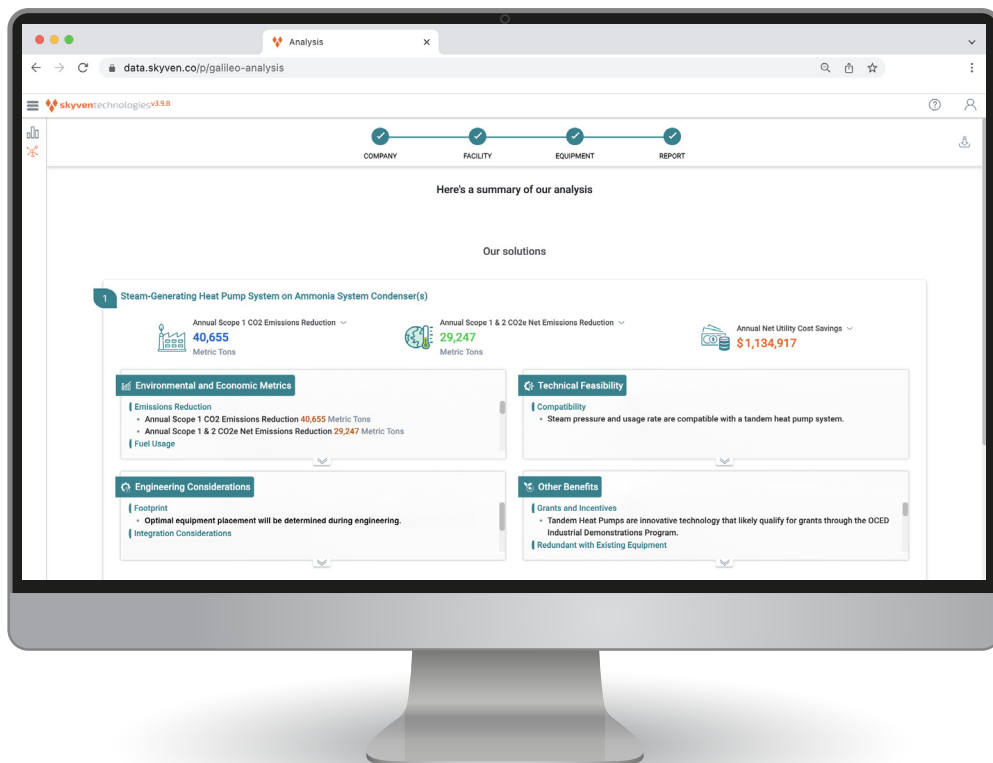

Galileo is a first-of-its-kind software modeling tool that rapidly scopes industrial decarbonization projects and completes conceptual engineering.
Done in hours instead of months of on-site consultation.

WHAT WE DO

Skyven is an Energy-as-a-Service provider that delivers clean process heat to industrial facilities at prices lower than natural gas.

Generate Instant Results with Galileo

Simple, Proven Software. Skyven's groundbreaking Galileo software utilizes Artificial Intelligence (AI) and site-level data to quickly generate and share a report containing engineering considerations, carbon savings, cost savings, and more. **At no cost to you.**

AN INSTANT ADVANTAGE

- » Results within 1-2 hours of answering plant-level questions
- » Automated conceptual engineering and scoping
- » Quantified carbon, energy, and money savings for each project option
- » Additional engineering insights into each project

AN INTUITIVE PROCESS

- » Galileo is performed remotely, with the Skyven team asking the questions and inputting data for you
- » Exact data (ie, data from HMI screens) is preferred, but rough estimates will work
- » Instant results generated with someone knowledgeable about current plant equipment and energy consumption (plant engineer, maintenance manager, etc.)
