

SKYVEN TECHNOLOGIES:

Decarbonize Profitably

20% of global carbon emissions are caused by industrial heat. That's as much as all of transportation combined. Our mission is to help industrial facilities significantly reduce their emissions and turn clean energy into a competitive advantage.

We do this by installing our latest technologies, such as Skyven's Arcturus line of Industrial Steam-generating Heat Pumps, at your facility at our own cost, billing only for the heat delivered.

WHAT WE DO

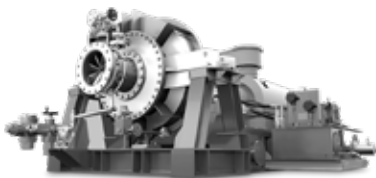

We are an Energy-as-a-Service and proprietary technology company that delivers clean process heat to industrial facilities at prices lower than natural gas.

The Skyven Advantage

Unique partnership: We identify, fund, and build decarbonization solutions, then maintain them for the life of our contract - at no cost to you.

Cutting-edge technology: Our state-of-the-art decarbonization technology is engineered with redundancy, helping you meet climate goals without affecting your operations.

Aligned incentives: We bill only for energy delivered by our systems, measured in real-time with IoT meters. We provide dashboards showing real-time data-backed savings and carbon metrics.

A Powerful Breakthrough in Decarbonized Steam:

» Skyven Arcturus Steam-generating Heat Pumps

Other cutting-edge technologies:

- » Enhanced heat recovery
- » Smart steam traps

“Skyven's ability to design and implement these successful solutions with no cost and no interruption to our process was a vital component to success.”

- Director of Sustainability, California Dairies, Inc - a leading dairy processor

Contact us at (214) 494-1152 or sales@skyven.co to get started.

Together, we can profitably decarbonize your facilities.
